

Residential & Commercial

About us:

Robert Beltran founded this company with a vision to create flooring with structural integrity, aesthetic beauty, technical proficiency and attention to detail. Beltran is a full service concrete restoration and transformation company. We can resurface your old concrete or work with you on engineering the design and installation of new concrete. Our flooring solutions are technical and mechanical processes that go beyond typical paints and garage floor coatings.

With our years of union training and over 15 years experience throughout all industries including manufacturing, education, retail, commercial and residential. We are confident we can deliver the solution you need for your existing concrete or new installation.

Epoxy Floor Systems

Epoxy Flooring is a process that combines high performance epoxy polymer resin with quartz or sand grains, flake or other additives. It can be tinted or clear and can be poured over existing surface decoration to seal and protect it. The result is a multi-functional floor that's decorative, sanitary, slip-resistant, and exceptionally durable.

Benefits of Epoxy Systems

Versatile: Epoxy can be applied over new, old, cracked, or damaged concrete floors to create a smooth, seamless, durable, and low maintenance flooring surface.

Strong and Durable: Epoxy acts as a durable hard coat sealant that protects flooring from stains and scuffs. It is highly impact and chemical-resistant.

Decorative and Functional: Epoxy can be combined with a variety of colors and materials to create decorative designs, traffic patterns, or marking work zones in industrial settings.

Polished Concrete Floors

Polished concrete is an innovative and economical process that is also environmentally friendly. It is achieved by mechanically grinding and polishing concrete utilizing industrial diamonds & impregnating hardeners. It is durable enough for forklift traffic, manufacturing and even aircraft hangars, it is dust free, and also provides a beautiful and reflective finish.

Benefits of Concrete Polishing

Improves Overall Safety: Concrete polishing creates a natural floor with a smooth and even surface and reduces the risk of falls due to slipping. Unlike some floor coverings such as tile and carpet, it won't peel or separate from the original surface.

Reduces Maintenance Costs: Polished concrete is strong and durable by transforming concrete into a denser smoother surface. Floors no longer need to be waxed or stripped and old, deteriorating concrete is strengthened by increasing impact and abrasion resistance.

Anti-Microbial Surface

Sanitary facilities are more important than ever, floors with cracks, holes or failing grout are hard to disinfect and provide a place for germs to hide.

Our flooring has a seamless monolithic surface. This makes it is easy to clean and sanitize, which meets biosafety and hygiene requirements. The anti-microbial surface inhibits the growth of bacteria. There is no outgassing after materials have fully cured.

Our Coatings are hygienic flooring options:

- Seamless, cleanable surfaces
- Resistance to harsh sanitizers
- Integral cove base to improve wash down
- Correction of floor slope for proper drainage
- Joint treatment and repair
